video service

Virtaus video service

Easy and secure video connectivity

The Virtaus video service has been uniquely designed for video interpreting, but it can also be used in other situations where an easy and secure video service is needed.

Virtaus is browser-based, which means that there is no need to install separate software. With our own video service, we can ensure ease of use and secure connectivity for all our users.

We have designed the features with the special requirements of video services in mind, to make using the service as easy and accessible as possible to all users, regardless of their technical and linguistic proficiency.

Secure
connectivity

High-quality video
and sound

Browser-based
interface

Can be used on
mobile devices

Easy to manage video service

Manage video service participants

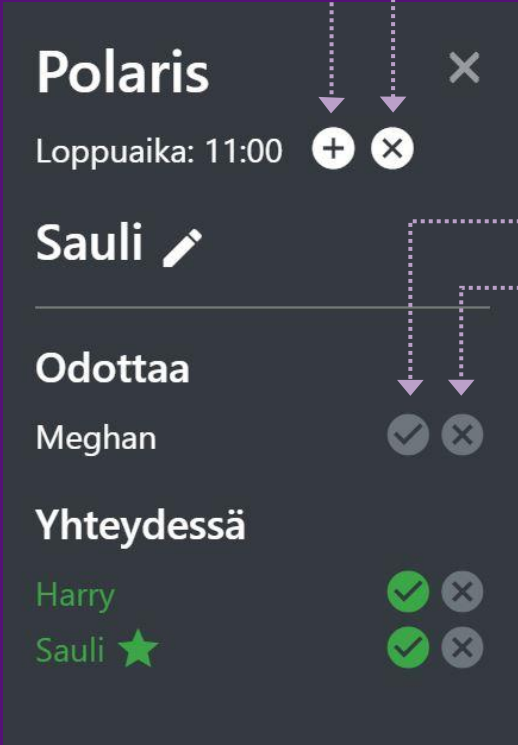

The video service administrator accepts each participant separately. Possible additional users can also be easily restricted.

Video service management

The administrator begins and ends the video service. This enables equal participation for all users.

Easily extend the video service duration

If you need more time for the video service than you originally anticipated, the administrator can easily extend the video service duration. The system will notify the administrator before time-out.

The screenshot shows a video service management interface with the following elements and annotations:

- Extend video service duration:** An annotation pointing to a plus sign (+) icon next to the end time.
- End video service:** An annotation pointing to a minus sign (-) icon next to the end time.
- Accept user:** An annotation pointing to a plus sign (+) icon next to a user's name.
- Reject user:** An annotation pointing to a minus sign (-) icon next to a user's name.

Section	User	Accept	Reject
Polaris	Loppuaika: 11:00	+	-
	Sauli	+	-
Odottaa	Meghan	+	-
	Yhteydessä		
Yhteydessä	Harry	+	-
	Sauli ★	+	-
